PROSPECTS

The Richard Cluver Investment Newsletter in continuous publication since 1987

June 2014

Richard Cluver is, as usual at this time of the year, away sailing in the Mediterranean and so we bring to you the usual lists of underperforming shares and suggested replacements for them, but without his usual market commentary.

Investment Grade Underperformers

Listed overleaf as usual are all shares which have been underperforming the Quality List averages in respect of price growth rates over the past five years. Note that all the shares listed qualify for inclusion in the ShareFinder Quality list because of their consistent dividend growth rates over many years and those listed in green under the Dividend Growth heading have been consistently delivering above-average dividend growth rates over at least the past five years. Being an underperformer is not necessarily an argument for disposing of any of these shares, but readers should note that if a share has failed to deliver above average price growth over as long a period as five years, then it is unlikely in the short to medium term to get much better. Some shares which feature in this list are gladly included in many portfolios of investors seeking dividend income rather than pure capital growth. So before you decide to ditch any of these, do your research carefully. To help you in this regard, we include a "Total Return" column which is the sum of the dividend yield and the annualised capital growth rate average over five years.

Top SA Performers:

The following shares are offered as suggested replacements for any in your portfolio that are achieving lesser growth rates than the ShareFinder Blue Chip average growth rates. The shares listed in the first block below have been selected because of their investment grade quality and their very high dividend growth rate and superior investment safety. The second block of ten offer significantly higher dividend growth rates but at the price of a greater degree of investment risk:

The shares listed in the third block below have been selected because of their investment grade quality and their very high price growth rate. These offer superior investment safety. Those in the fourth block generally offer significantly higher price growth rates but at the price of a greater degree of investment risk:

The Rand

Belying the supposed concerns about the durability of the local economy, the Rand has continued strengthening since its weakest point at the end of January and ShareFinder's projections on the right suggest that it will be strongest against the Dollar and the Pound on May 13 and the Euro on April 30. Thereafter it is likely to start weakening again slightly since by then it will have gained excessively relative to its long-term mean. On average against these three main world currencies the Rand has over the past three years lost value at an average annual rate of 21.13%.

Unit Trusts

The topmost (green flagged) unit trusts listed below conform to the ideal that the latest annual price growth rate is greater than the average of the past five years (Half) and the five-years average is greater than that of the previous ten years (Full). In the groups that follow it should be noted that a high ten-year growth average is seldom followed by similarly high interim growth rates which underscores the fact that it is very difficult ever to select consistently high-performing funds. Trusts with the lowest Risk number are the least price-volatile.
